

Altiora

137 West Coast Road, Arthurs Pass Village

Upon Arrival

To turn the water on, the connection is to the right of the carport under the bathroom window (blue cover). Nothing else outside needs to be touched.

Inside, under the water cylinder there is a yellow tagged lever which needs to be turned up to stop the water from draining from the cylinder.

Open all taps in the bathroom and kitchen to allow air to escape, especially the bathroom as this takes longer to clear and will stop the water cylinder from filling.

Once the water is running smoothly, close the taps off and turn on the cylinder (switch by the cylinder and on the meter board) so it can start heating the water.

Upon Departure

Kitchen

- Do all washing up and put away.
- Wipe down all benches.
- Clean element (use Ceraclen and a dry cloth).
- Wedge fridge door open.

Bathroom

- Clean toilet and shower.

Vacuum throughout and mop hard floors.

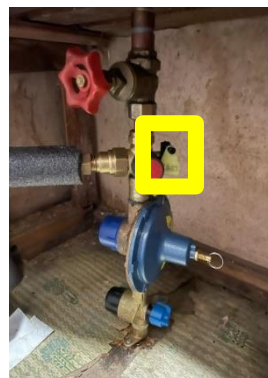

Fireplace

Before leaving, please sweep out the cold ash from the fireplace and dispose of it in the metal bucket located in the carport.

Restock the two boxes beside the fireplace with kindling and firewood. This can be found in the carport, opposite the front door. If this is getting low, please let one of the Trustees know.

Water System

Switch off the HWC switch at both the plug and meter board. Turn the yellow tagged lever down and turn off the water outside under the blue cover. You should see the water flowing out of the pipe under the window. Do not leave the inside taps open.

Half-close the curtains in each room to protect the furniture/carpet but still allow some warmth into the rooms.

Take all rubbish out to the dumpster across from the driveway.

Please record your visit in the Visitor Book on the mantle. If there are any issues around the property, please advise the Trustees.

Turn off the power at the switch board in the hallway. Lock up and leave the key in the lockbox (code 1925).
